International Seminar on JOURNEY FROM EVOLUTION TO ZENITH

Date : 30.04.2022
Venue : Seminar Hall

Organized by
Department of History
Kandaswami Kandar's College,
Velur - Namakkal

About the Department:

The Department was established as the allied department to cater the needs of B.A.Economics 1968. The department of History was started in the year 1981. It is one of the oldest Department in the College. The department has been upgraded to offer post graduate course from the year 2000. The Curriculum makes it possible for students to have Comprehensive as well as in depth of Knowledge in history so as to enable them to clear competitive examinations and take up administrative, Teaching and Research with confidence in future. The Students of our Department secured Periyar University rank and Gold medal for their academic achievements. The department was headed by many renowned faculties,the heritage still continue.

About the Seminar:

Darwin's Theory on Human Evolution: Living Organisms possess distinct characteristics, display organisational and functional unity, entail a mechanism of origin and Evolution of diversities and maintain a

balanced relationship with nature. Most aspects of evolution indicate that the Knowledge of the past has become essential for fully understanding the present. The history of life comprises of two aspects, one is the Origin of life on earth and the other is mechanism involved in the gradual changes and adaptations of living organisms through time which is known as the evolution of life.

Theories of Evolution: Life had evolved along with evolution of earth towards the end of 18th century. Charles Darwin was one of the greatest naturalist and philosopher of 18th century. Darwin made elaborate observations on nature of the land, plants and animals of the region. The principle of Darwinism are overproduction, struggle for existence, variations, survival of the fittest of natural selection and origin of species.

The space research activities were initiated in our country during the early 1960's, when applications using satellites were in experimental stages even in the United States. With the live transmission of Tokyo Olympic Games across the Pacific by the American Satellite 'Syncom-3'

demonstrating the power of communication satellites, Dr. Vikram Sarabhai, the founding father of Indian space programme, quickly recognized the benefits of space technologies for India.

The origins and the evolution of the Indian Space program is one of the most inspiring stories of India since its independence in 1947. The reason behind this is the context in which the country's space program developed.

The first Indian spacecraft 'Aryabhata' was developed and was launched using a Soviet Launcher. Another major landmark was the development of the first launch vehicle SLV-3 with a capability to place 40 kg in Low Earth Orbit (LEO), which had its first successful flight in 1980. Through the SLV-3 programme, competence was built up for the overall vehicle design, mission design, material, hardware fabrication, solid propulsion technology, control power plants, avionics, vehicle integration checkout and launch operations.

REGISTRATION FEES - Rs.150/-

The Registration fee can be paid on the spot by cash

The registration fee includes seminar kit, refreshment and working lunch. No T/A/D will be admissible for the participants.
